

Epitropos Pty Ltd trading as ArchiAdmin

ArchiAdmin

ArchiAdmin is a enterprise level business management software solution for architects, engineers, quantity surveyors, project managers and building managers. It has exclusive endorsement by the largest professional institute in Australia, the Royal Australian Institute of Architects. ArchiAdmin is used by the most prestigious architectural and engineering design companies in Australia and internationally. It is the market leader in Australia and is exported to New Zealand and South East Asia.

ArchiAdmin is a niche market application of the E Admin business process management software which uniquely integrates with the Microsoft Office suite and automates document management email and electronic filing. The software is available in a high end client server platform for multiple computers and offices which reliably share a common server.

The patented technology profiles jobs, projects or matters and manages document templates/precedents and tasks providing the ability to create, edit and save workflows intuitively from past to future projects. The software enables business methods to be defined and saved as a cumulative intellectual

property investment and provides a host of functions and automation in the creation, electronic filing and dissemination of correspondences and other documentation. Complete quality assured templates for particular professions or business types can be created, defined and saved. Multiple software applications of the one hybrid can be delivered with niche market specific interfaces focused on geographic or sector specific business methods.

The business process manager software component addresses the need for industry sectors to define best practice in their particular business niche through an automated management system.

AusIndustry has recognised the potential of the system and provided a grant under the Commercialising Emerging Technologies Program to enter patents in the US, Canada and Europe and carry out market research with the aim of securing venture capital for commercialisation in other markets. ArchiAdmin has a granted Australian Patent for the technology.

ArchiAdmin seeks investors and industry leaders interested in developing and commercialising niche market releases to country and sector specific markets.

Website ats.business.gov.au

The Australian Technology Showcase (ATS) is designed to promote globally, leading edge, Australian innovative technologies. The ATS aims to increase exports and attract foreign and local venture capital.

Both the Australian and various State Governments have been keen supporters of the ATS since its inception in April 1997. The national focus of the ATS demonstrates not only the Australian Government's commitment to the promotion of Australian science, engineering and technology internationally, but also serves to increase awareness of Australia's capacity in leading-edge skills and technologies.

Visit the ATS website www.ats.business.gov.au to:

- Read about Queensland and Australia's innovation and ingenuity
- Buy something from the Showcase for use in your business
- Get a licence to manufacture or distribute one of the technologies in a new market
- Invest in the company that started it all or in a joint venture to take the idea into the future
- Gain access to the know-how that gave rise to the technology.

A panel of independent experts in each state or territory rigorously assesses all applicant technologies to ensure they are clearly innovative and leading edge. Membership to the showcase is reliant upon the technology meeting ten eligibility criteria. These are that the technology must be:

Clearly Innovative and represent a significant step forward in the technology itself or its utilisation;

Scientifically Credible based on secure principles and understanding;

Significant Local Content in terms of intellectual property or embodied skills;

Demonstrably Marketable with an identified existing or potential market advantage and a substantial identified market;

Commercially Attractive and likely to appeal to international investors and/or offering opportunities for joint venturing;

Socially and Environmentally Beneficial by meeting community needs or standards;

Readily Exportable as a world class technology with significant global commercial potential;

Backed by Skilled and Committed Stakeholders willing and able to make an ongoing contribution to the ATS or with a sound track record of technology commercialisation;

Built on Strength involving industry sectors or technologies capitalising on local strengths and demonstrating high added value and capacity for growth; and

Readily Implementable as a showcase project or site, capable of being demonstrated on-site by exhibition or by on-line media.

The ATS is proudly supported by:
